

## Versatex® Competitive Edge

### 1) Looks more like real wood!

**Versatex's Timber Ridge Finish** is the most realistic looking, textured trimboard finish, offered today. It not only resembles rough sawn cedar, but also closely matches fiber cement finishes like those of James Hardie and Certainteed, creating a more consistent and natural exterior look.

### 2) Paints Well!

**Versatex®** is produced at a low surface gloss level. **Versatex's Timber Ridge and Smooth Matte Finishes** readily accept quality latex paints and exhibited excellent adhesion strength when tested by PPG Industries and Sherwin Williams in accordance with ASTM test method D3359 Standard Test Method for Measuring Adhesion (see our technical bulletins for additional details).

PPG is so confident in the paintability of **Versatex®** that it now offers a 10 year warranty on one coat and a 25 year warranty on two coats when PPG paints are factory applied to **Versatex®**

### 3) Greater Weather Resistance!

**Versatex®** yielded superior UV resistance when independently tested in a standard QUV weathering cabinet against competitive cellular PVC trimboards. **Versatex®** showed little or no yellowing when subjected to 2000 hours of harsh light and moisture exposure.

### 4) More Consistent Thickness!

**Versatex®** trimboards and sheets are produced to a thickness range of +/- 1/32", which is half the amount specified by our competitors.

### 5) Tougher Surface!

Based upon independent testing by Architectural Testing Labs in accordance with ASTM D256, Notched Izod Impact test, **Versatex's** exterior skin has a durability and impact resistance approaching that of Celuka type PVC trims, thus making our product more resistant to scuff and dents.

### 6) Flexible and Innovative!

Ask about our cut-to-length program on our mixed nut units, which gives you a factory packed unit that contains at least one of every board width, in one thickness.

If you are looking for something new in trimboards, checkout our patent pending Stealth Trim System, our new T & G beaded sheet, or our nominal 8" factory folded corners.

**Features and Benefits of Versatex Cellular PVC**

- ✓ Proprietary Free Foam cellular PVC technology for maximum workability and performance.
- ✓ Cuts, mills, and routs, like any premium wood, while providing durability and protection against the forces of nature.
- ✓ Readily accepts 100% acrylic latex paints, but does not require painting for protection.
- ✓ Available in all standard trimboard sizes, as well as sheet, beaded soffit and wainscoting, prefabricated outside corners, and other specialty molded profiles.
- ✓ Can be heated and bent into tight radiuses for archways around windows and doors.
- ✓ Installs with standard tools and fasteners. It can be gun nailed, manually nailed, or screwed with stainless steel fasteners.
- ✓ Tested in accordance with ASTM test methods pertinent to exterior trim and siding products.
- ✓ Transferable 30 year warranty (Only transferable warranty in the trim industry today).
- ✓ All trimboards are available in either our smooth matte or timber ridge finish, which compliments any fiber siding project.
- ✓ Patent Pending Stealth Trim System
